NETTA'S PANTRY

Add a meal to the weekly menu

A step-by-step guide for making a meal available in both **one-time boxes** and **weekly subscriptions**.

1. Set up the meal

1. Open **Admin** → **Meals** and click **Edit** beside the meal.
2. Under **Purchase availability**, check both **Available for one-time purchase** and **Available for subscription**.
3. Under **Sizes & prices**, configure each size you want to offer:
   - Check **Active**.
   - Enter a positive whole-number **serving count**, such as 1, 2, or 4.
   - Enter a **price greater than $0**, with no more than two decimal places.
   - Check **One-time purchase** for each size customers can buy in a one-time box.
   - Select **Standard subscription size** for exactly one size—the portion subscribers will receive.

   You may offer several one-time sizes. Subscriptions use the single designated standard size, which can also be sold in one-time boxes.
4. Check **Show on the customer menu**, then click **Save changes**. Click **OK** in the confirmation popup. The meal should be marked **Visible**.

2. Include the meal and publish the week

5. Open **Admin** → **Weekly Menus** and select the week you want customers to order from.
6. Find the meal and click **Add**. Its button should say **On the menu**. If it already says that, leave it selected.
7. Check the week's status. If it says **Draft**, click **Publish this week**. If it already says **Published**, leave it published.
8. Open or refresh **This Week's Menu**. Select **One-time box** and confirm the meal appears, then switch to **Weekly subscription** and check again.

> **If a meal is missing:** Check all three requirements: it is **Visible**, it is **On the menu** in the latest published week, and its size is available for the selected order type. A meal missing only from subscriptions usually needs **Available for subscription** enabled or a valid **Standard subscription size** selected. Publishing a week does not automatically enable either purchase type.

The customer menu displays the latest published week by its week-start date. Save meal edits before checking the customer menu.
